

HOW TO CLEAN CUSTOM HARDWARE

A SOFT, DAMP CLOTH

To clean external plastic components, all you need is a soft cloth slightly moistened with soap and water.

DIRECT LIQUIDS

Do not pour or spray liquids directly onto your devices, even if they are disinfectants or detergents.

WIPES

You can use wipes if you need to apply slightly more liquid to your device.

AEROSOLS OR SPRAYS

Do not spray aerosols directly onto your devices.

A HYDROALCOHOLIC SOLUTION AND CLOTH

If you choose to use a hydroalcoholic solution, make sure to spray it onto a cloth first.

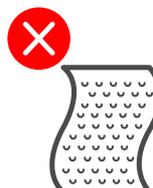

CLEANING PRODUCTS WITH >70% ALCOHOL

Do not use solutions containing more than 70% alcohol. You could damage the plastic and/or display.

CLEANING PRODUCTS WITH <20% ALCOHOL

You can also choose to use other solutions, but make sure they contain less than 20% alcohol (e.g. isopropyl alcohol).

ABRASIVE PRODUCTS

Do not use abrasive cleaners, solvents, or materials (powders, brushes, sponges, etc.).

GENERAL GUIDELINES

- Do not clean the electrical contacts
- Avoid excessive rubbing
- Try to keep your devices out of direct sunlight
- Do not insert anything into the smart-card/SIM-card slot

This cleaning guide applies to Custom POS and Data Intelligence hardware.
